

Get the whole group to **BeThere.**

No organiser. No maybe - just the whole group, there.

Meet **Vasanth**

- Age 21
- Studies Law at St. Andrews
- Enjoys playing volleyball and board games
- Loves to cook for his friends
- Extroverted and reliable

Vasanth's Christmas break, mapped as he felt it

THE ORGANISER'S PROBLEM

Vasanth loves to meet his friends, but organising is difficult and chasing replies from group members is frustrating.

Meet **Milly**

- Age 19
- Studies English Literature at St. Andrews
- Likes to play cello and read
- Recently joined her university's netball society
- Shy and introverted

Milly's netball social, mapped as she felt it

THE PARTICIPANT'S PROBLEM

Milly would love to engage with her netball society's socials more, but she is *hesitant* because she wants to be sure her friends are *going too*.

RESEARCH

To better understand this problem, we interviewed
university students **about their social lives.**

Eddie, 21

Psychology · Goldsmiths

The organiser

“If I drummed up the plan, and it’s taken **considerable time** - logistics, pricing, whether everyone’s okay with it - and then it falls through after all of that, that’s **quite frustrating.**”

Chloe, 19

Int. Relations · King's
College

The participant

“As days went past, the meetup got **more drawn out**, second thoughts crept in, and more and more people ended up **pulling out**.”

Luca, 20
BioChem · Oxford

The conditional

“If I’m meeting a friend of a friend, my attendance is **conditional** on my friend being there. I’ll **wait for them to respond first**, then decide.”

Two key stakeholder **groups**

1. SUGGESTORS

One sided and exhausting. *Awkward* to push for replies.

2. PARTICIPANTS

Uncertainty *compounds* uncertainty. Some people's participation is *contingent* on others.

The most connected generation - and the loneliest

70%

less time 15-24s spend with friends in person than two decades ago.

US Surgeon General, 2023

40%

of UK 16-24s feel lonely often or very often - the loneliest age group.

BBC Loneliness Experiment, 2018

76%

of young adults say seeing friends is how they look after their wellbeing.

ONS, Social Trends, 2025

Plans dying is the **norm**

We surveyed 47 people about how they plan meet-ups. The pattern is everywhere.

87%

send a “maybe” or delay their reply to a plan they are unsure about.

60%

say the meet-up time gets moved half the time or more.

50%+

say over a third of their meet-ups never make it out of the chat.

Almost nobody gives a **straight answer**

"When you are only slightly unsure you can make a plan, what do you send?" · n=47

A "maybe" or delay

87%

A clear yes / no

13%

OPPORTUNITY - HOW MIGHT WE

How might we reduce **hesitancy in undergraduate friend groups when planning to meet up so that groups go from frustrating '**maybe**' responses to a clear **consensus**?**

User Story

As a social member of my friend group who tends to organise things

I want to be able to easily suggest meetups to my friends

So that I can see my friends more without the frustration of chasing responses

Our initial design

Suggest a meet

GROUP

Lithuanian Study Group

Climbing Group

Meetups

Groups

Account

“I could see this being used to just check for people's availability - sending out a vague idea of ‘I want to meetup’ and seeing what everyone wants to do.”

“Having a set time seems quite restrictive - it would be nice to agree on a time within the group.”

“It's not immediately obvious why there's a flexible and fixed option for times.”

After some refinement

“
These options are quite confusing - I don't really understand when you would ever use the rough plan option.
- usability test

User Story

As a new and introverted member of a friend group

I want to only attend social events if I already know people going

So that I feel comfortable

Initial mock-up

Conditional attendance - "I'll go if..."

28th May 2026

Bowling

TenPin Bowling
Bexley health
16:00

I will make it

I won't make it

I will make it if...

...

is going
confirm

I will make it

I won't make it

I will make it if...

Joe	☐
Bethan	☐
Adi	☒
Lily	☒
Nathan	☐

at least one of all of

are going

"It's either I'll go if one person goes, or if a group of people go. I don't think I'd need something this complex."

"There's gotta be an and/or type thing with the ifs - I'll go if Adi and Lily are going, or if either of them are going."

"These two options are definitely the things I'll be thinking about if it were a meeting where I'd conditionally go."

One plan, **decided live**

Two seeded phones, the real deployed app: send a plan → the group +1s times and activities → the deadline locks → a second phone answers “I’ll go if” → “you and 4 others are in”.

WATCH FOR

No organiser - it’s anonymous

The group sees the plan, never who sent it.

WATCH FOR

Counts public, names private

You see momentum, never who voted.

WATCH FOR

“I’ll go if” resolves at lock

The blind moment resolves server-side.

And the curve **inverts**

Same Friday, same friends. The faint line is Vasanth's journey from before - the same plan in the group chat. BeThere inverts it.

User **Story**

As someone wanting to organise a meetup for my friends

I don't want to have to convince people to download a new app

So that I can save time and avoid frustration

Our initial design

Create a group

Invite with a join code

Share the meetup

Join - no app to download

IN HIS WORDS

Hear it from Luca

on onboarding friends

Joining, with **no app to download**

On a brand-new device: open the invite link → “Continue” → you’re in the plan and can respond. No install, no account hurdle.

WATCH FOR

Zero install

WATCH FOR

Opens in the browser

WATCH FOR

Instantly in the plan

User Story

As a student in numerous friend groups

I want to suggest meetups bringing together several groups of people, and to allow friends to bring along their friends

So that I can invite people I don't know who would improve the event

After some refinement

“

Going to a group event is a lot about the chemistry between the group. If someone was there I didn't really know, it might ruin that.

- usability test

Implementation

Under the hood

One typed pnpm monorepo • TypeScript end to end

press → to walk through each layer ↓

What went well

Continuous feedback from **new and **recurring** users gave us diverse insights into how the problem is actually solved.**

Letting users plan **real meetups with their friends using BeThere helped identify the pain points of the app.**

Agile development

Trello for mapping user needs.

Linear for engineering issues.

What we would do differently

Testing: a stronger test suite with wider code coverage would've prevented bugs from recurring.

Sprint planning: earlier iterations were too feature-focused - user stories were an afterthought.

Impact

User impacts & **benefits**

Vasanth

- ✓ Goes out with his friends regularly, despite his busy schedule.
- ✓ Feels less lonely.

Milly

- ✓ Is more comfortable with meeting new people.
- ✓ Has begun suggesting meetups of her own.

Wider **impacts**

If fewer plans die in the chat, the benefit ripples outward.

MENTAL HEALTH

University counselling services

Less isolation to pick up.

PUBLIC HEALTH

NHS mental health provision

Loneliness is a population-level cost.

COMMUNITY

University societies

More socials that actually happen.

LOCAL ECONOMY

Local venues

Plans that land fill seats.

Looking ahead

Availability changes

When Milly's plans change after she confirms, tell the people who said "I'll go **if Milly**" - right away.

Plus-ones, in the group's control

Vasanth can welcome a guest without the **people he'd rather not** see turn up.

A chat once it's on

A per-meetup chat that opens **only after a plan confirms** - settle details without reopening the dead chat.

BeThere

You're in

Be there - without the **organiser**

I care less about what we do. I just want to see them.

- the reason we built it
