

BeThere

Taking the pain out of
friend group meet-ups

DRP02 - Nelson Gong, Noah Seymour, Lukas Trakimas, James Hughff

Vasanth

- Age 21
- Studies Law at St. Andrews
- Enjoys playing volleyball and board games
- Loves to cook for his friends
- Extroverted and reliable

The **organiser**.

Vasanth's Christmas break, mapped as he felt it.

Vasanth loves to meet his friends, but organising is difficult and chasing replies from hesitant group members is frustrating

Milly

- Age 19
- Studies English Literature at St. Andrews
- Likes to play cello and read
- Recently joined her university's netball society
- Shy and introverted

The passive participant

Milly's netball social, mapped as she felt it.

Millie would love to engage with her netball society's socials more, but she is hesitant because she wants to be sure her friends are going too

To better understand this problem, we interviewed university students about their social lives.

“If I drummed up the plan, and it's taken considerable time, looking at logistics, pricing, whether everyone's okay with it, and then it falls through after all of that, that's quite frustrating.”

Eddie, 21, the *organiser*
3rd year Psychology at Goldsmiths

“As days went past, [the meetup] got more drawn out, second thoughts crept in, and more and more people ended up pulling out.”

Chloe, 19, the *passive participant*
2nd Year International Relations at King's College

*“If [I’m meeting] a friend of a friend,
my attendance is conditional on my
friend being there. I’ll wait for them to
respond first, then decide.”*

Luca, 20, the passive participant
BioChem at Oxford

Two key stakeholder groups.

1. SUGGESTORS

One sided and exhausting. *Awkward*
to push for replies.

2. PARTICIPANTS

Uncertainty *compounds* uncertainty.
Some people's participation is
contingent on others.

50%+

of our 47 survey respondents said **over a third** of meet-ups never made it out of the chat.

60%

said the meet-up time gets moved **half the time or more.**

87%

send a **maybe** or **delay** their response to a plan they are unsure about

a decade ago

7%

today

22%

of young people have one or no close friends

25%+

of lonely young people have sought therapy

BACP, *Loneliness impacting majority of young people's mental health,*

[<https://www.bacp.co.uk/news/news-from-bacp/2025/20-june-loneliness-impacting-majority-of-young-people-s-mental-health/>]

*"How might we reduce **hesitancy** in university friend groups when planning to meet up so that groups go from frustrating '**maybe**' responses to a clear **consensus**?"*

User Story

As a social member of my friend group
who tends to organise things
I want to be able to easily suggest
meetups to my friends
So that I can see my friends more without
the frustration of chasing responses

Implementation

System Architecture

Why this **stack**

TypeScript + pnpm monorepo

One language across client, server, and shared logic. Refactors are **type-checked end to end**.

tRPC v11 + Zod

A **fully type-safe API** with zero hand-written types or codegen. One schema validates server input and types the client.

Expo / React Native

One codebase ships to **iOS, Android, and web** - so we could test with real users on whatever device they already had.

Fastify 5

A lightweight, fast Node server - a thin, low-overhead host for the tRPC layer.

Postgres + Drizzle ORM

Groups, votes, and RSVPs are inherently relational, so the database gives us **integrity for free**, with typed SQL.

Clerk

Managed auth with **real Google OAuth** - we don't roll our own identity or security.

Git → GitHub Actions CI/CD

Lint, typecheck, and tests run on **every change**, with continuous deployment to AWS App Runner (API) and Vercel (web).

Evaluation

Looking Ahead

Plus-ones are still an awkward problem.

Vasanth may welcome plus-ones to his meetup, but there are some people he would prefer not to see there.

Milly's availability may change
after confirming she'll **BeThere** .

People who will go if Milly goes want to be
notified she might not make it.

What Went Well
