

The Problem

University friend groups have trouble organising meetups, typically due to poor communication.

From our interviews and our survey of 46 people, we found out that it is often the case people usually wait to see who else responds before they decide, leading to friction in the group chat.

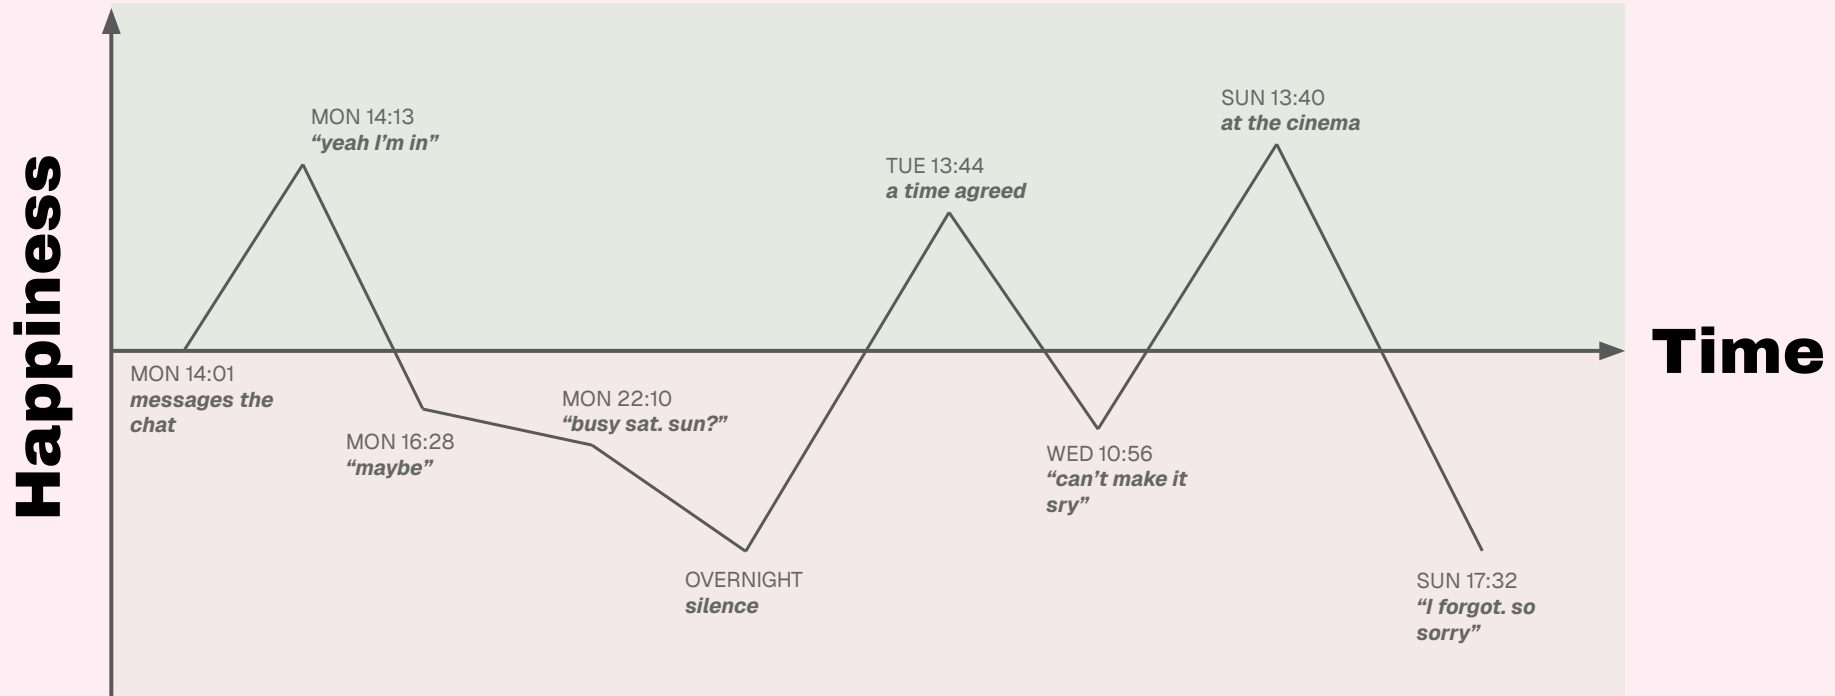

Vasanth

- Age 21
- Studies Law at St. Andrews
- Enjoys playing volleyball and board games
- Loves to cook for his friends
- Extroverted and reliable

The organiser.

One plan. From the *suggestion*, to the empty seat.

For people like Vasanth, who often organise their friends, choosing the wrong time for a meetup can be a common cause for people saying 'maybe' and then never turning up.

79% of university friend groups we asked said the meetup time got moved more often than not.

"How might we reduce hesitancy in university friend groups when planning to meet up so that groups go from frustrating 'maybe' responses to a clear consensus?"

Our Focus This Week

Onboarding: getting friends on BeThere

Objective Evaluation

Time taken and abandonment rate of students as they:

1. Create an account.
2. Join a group.
3. Confirm attendance to a meetup.

Iteration 1 - Quantitative Measurements

We timed how long it takes for four users to create an account, join a group via invite code and confirm attendance to a meetup. The times were 1m53s, 1m20s, 1m12s and 1m34s. Average time: 1m30s

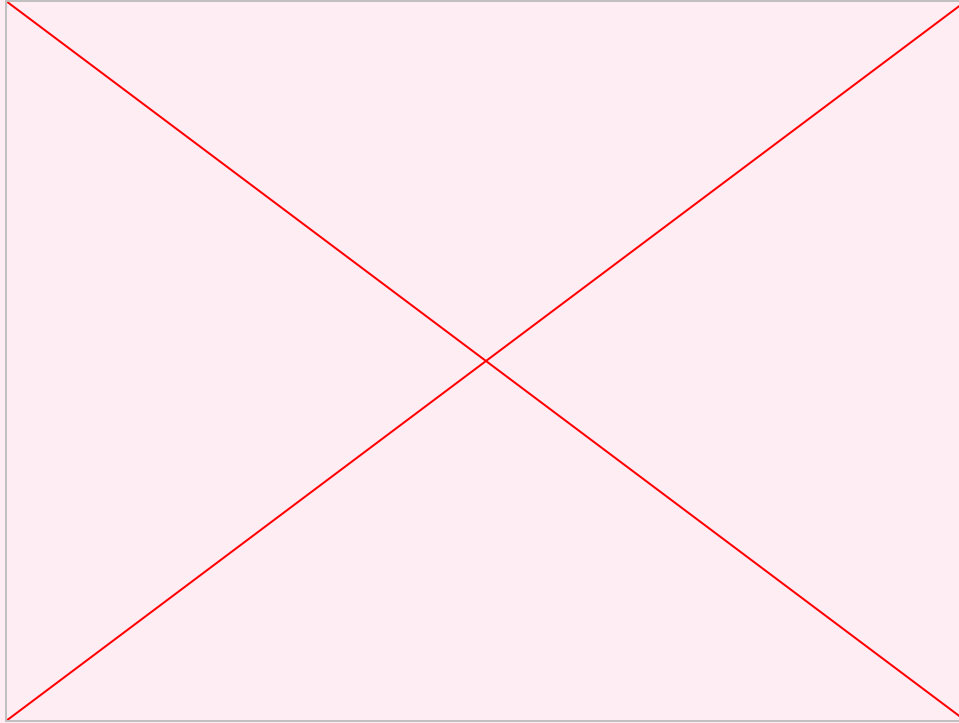

We asked a user to attempt suggesting an actual meetup with BeThere with a friend group.

Out of 6 friends:

- 3 were unable to download on their iPhone as only an Android app is available.
- 1 did not download as downloading an app felt like a big task for something that could be done with a group chat.
- 1 downloaded but gave up at the account creation screen.
- 1 successfully downloaded, joined the group and the meetup.

Abandonment rate $\frac{5}{6}=83\%$.

Iteration 1 - Feedback

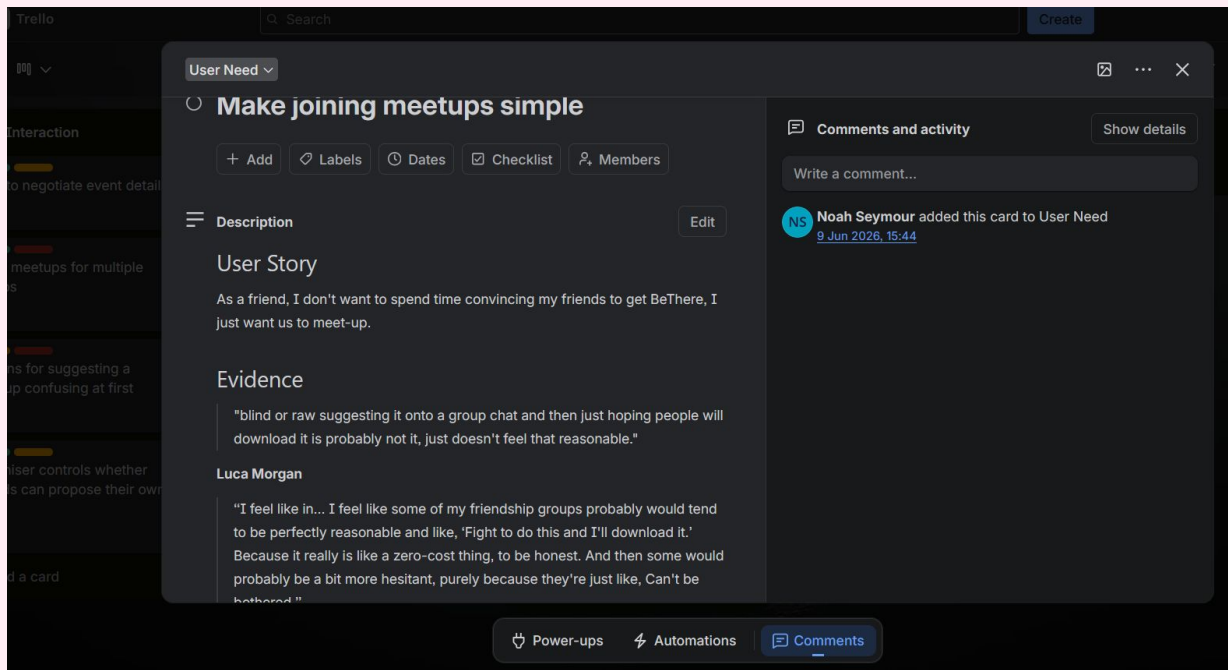

Iteration 1 - Findings

- Some users would download an app to join a group
- Some users are more hesitant and this is mainly due to downloading an app being cumbersome

User Story 1

As a **friend**, I don't want to spend time convincing my friends to get BeThere, I just want to **meet-up**.

Iteration 1 - Implementation Plan

- Create a web-deployed version which is mobile-friendly so that users can respond to meet-up requests without having to download an app.
- When creating a meet-up, add a link that can be easily shared with users in the organiser's original group chat sending friends to the web deployed version of BeThere.

Iteration 2

Iteration 2 - Quantitative Measurements

We timed how long it takes for three users to create an account, join a group and confirm attendance to a meetup. Their times were 1m40s, 1m13s and 1m25s. Average time is 1m26s.

We asked a different user to attempt suggesting an actual meetup with BeThere with a friend group. The user sent a web invite link to their group chat.

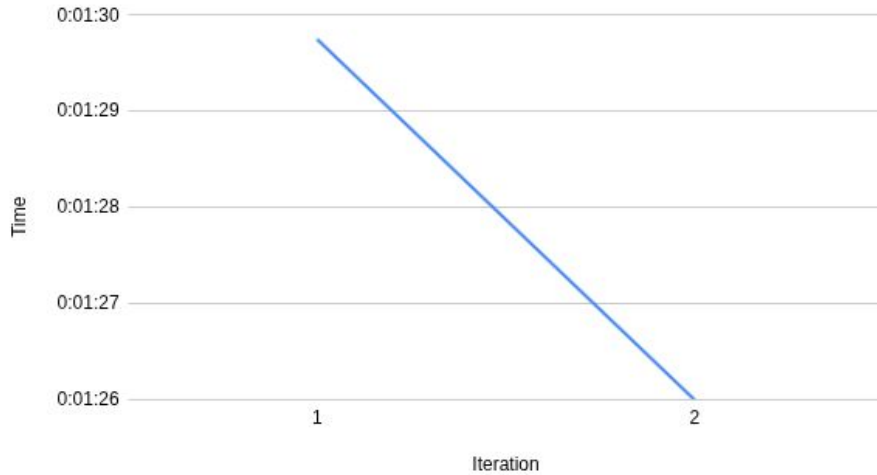

Out of 5 friends:

- 1 did not click on the link.
- 2 clicked on the link but gave up at the account creation screen.
- 2 successfully created an account, joined the group and the meetup.

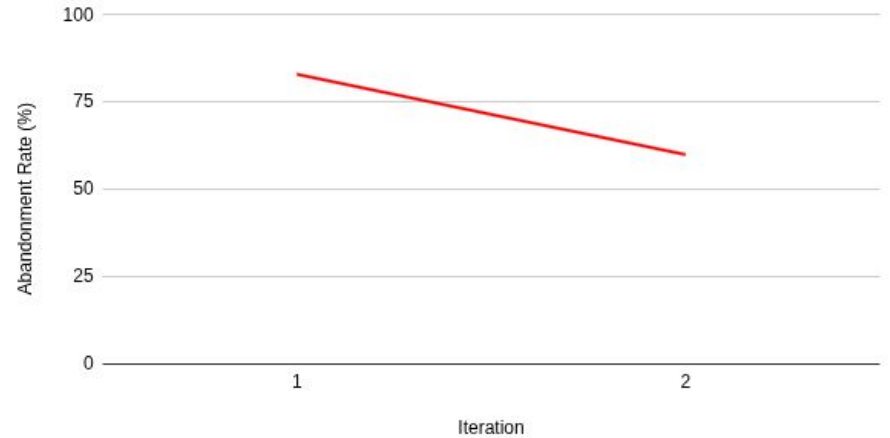

Abandonment rate is $\frac{3}{5} = 60\%$.

Iteration 2 - Quantitative Measurements

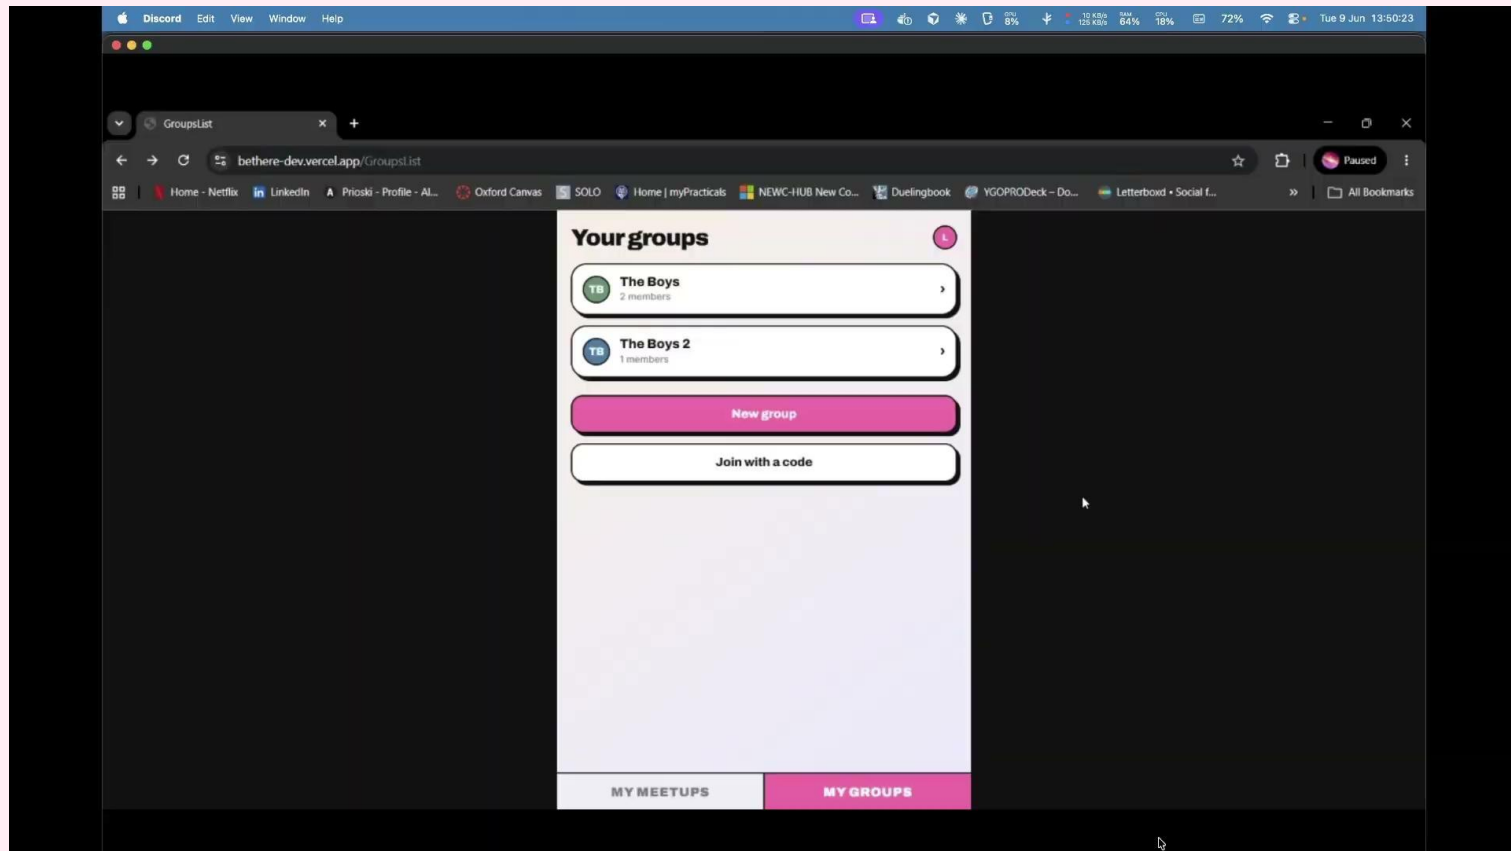

Average Time To Join Meetup At The Start of Each Iteration

Abandonment Rate When Onboarding New Users at the Start of Each Iteration

Iteration 2 - Feedback

Iteration 2 - Findings

- The process of making an account and signing up to some new platform can put some users off.
- In order for friends to adopt our system, we must make it simpler to respond to new meetups.

Iteration 2 - Implementation Plan

- Create a meetup link that can be shared into group chats to make the intention of the link more direct
- Show a 'you're invited' screen when you first enter the link to better convince friends to sign up, seeing the plan

Iteration 3

Iteration 3 - Feedback

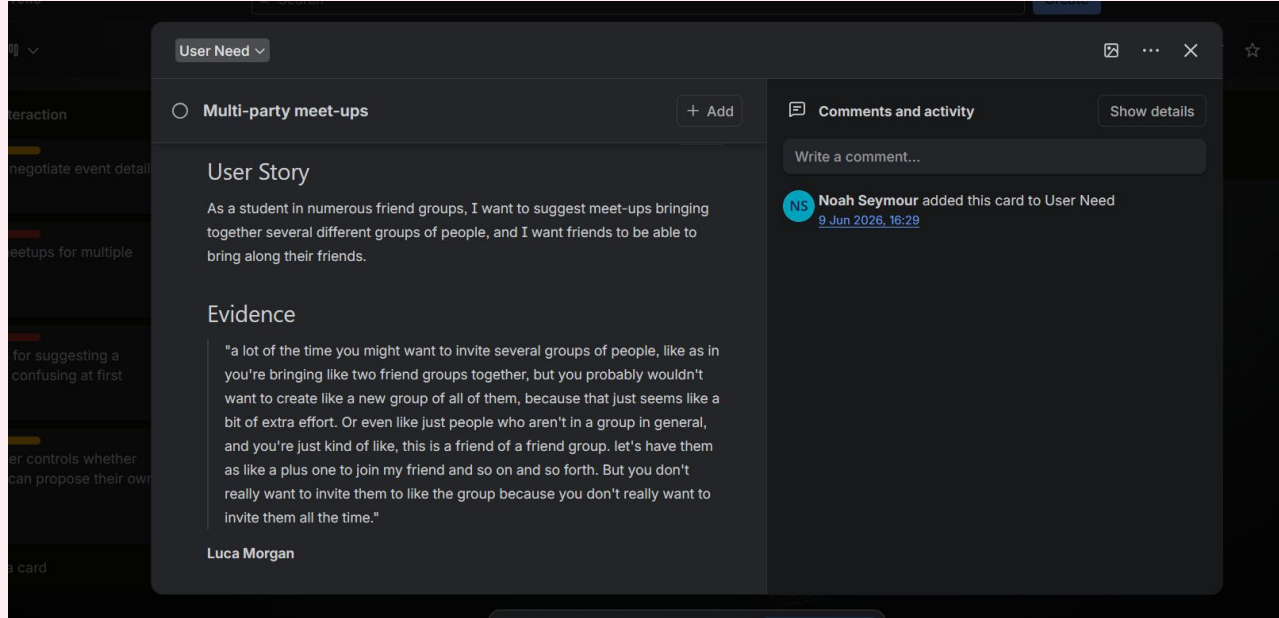

Iteration 3 - Findings

- In some meetups people want to bring friends of friends
- But they don't necessarily want to add these friends to the group
- They want the ability to one-off add people
- Likewise sometimes people want meetups that involve more than one of their friend groups

User Story 2

As a student in **numerous** friend groups, I want to suggest meetups bringing together **several** groups of people and I want friends to be able to bring along their friends.

Iteration 3 - Quantitative Measurements

We timed how long it takes for three users to create an account, join a group and confirm attendance to a meetup. The times were 1m10s, 1m3s and 1m14s. Average time:

We asked a different user to attempt suggesting an actual meetup with BeThere with a friend group. The user sent a web invite link to their group chat.

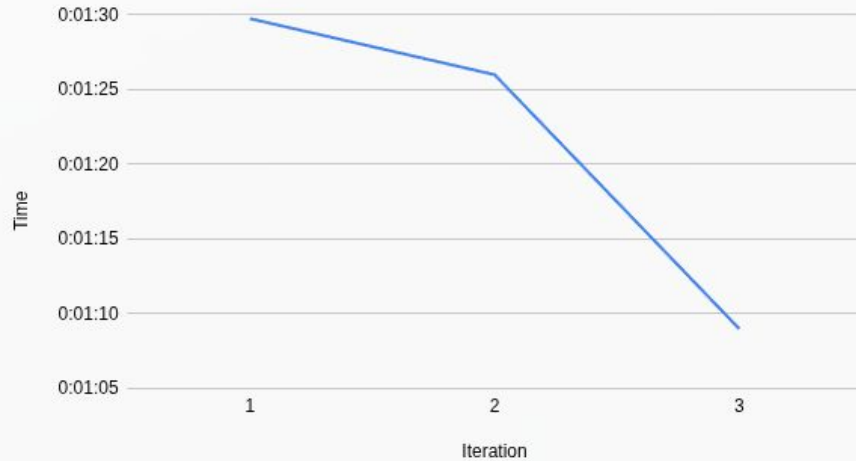

Out of 5 friends:

- 1 did not click on the link.
- The other 4 who clicked on the link followed through to join the group and the meetup.
- The first friend who did not click the link followed the link and joined the meetup after the rest of the group pushed them to do so (FOMO).

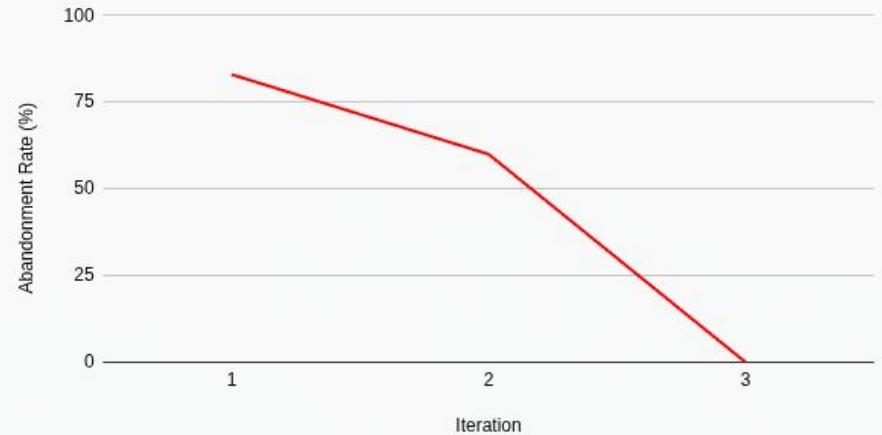

Abandonment rate $\frac{1}{5}$ =20% turned into 0%.

Iteration 3 - Quantitative Measurements

Average Time To Join Meetup At The Start of Each Iteration

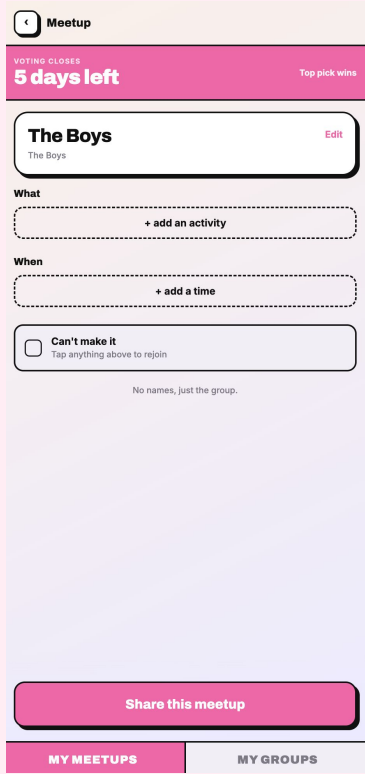

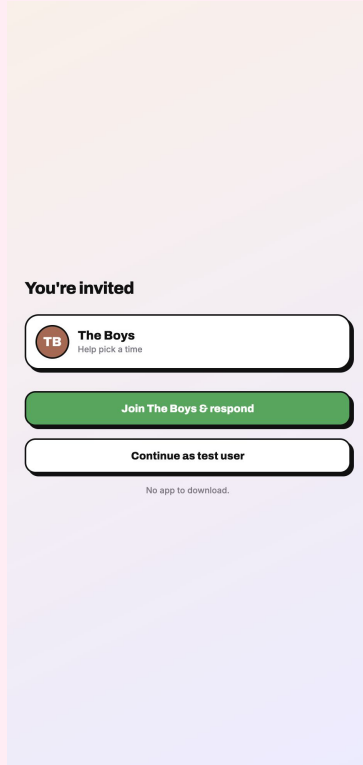

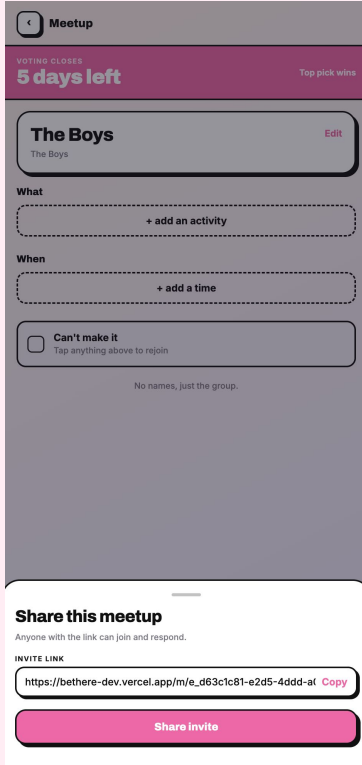

Abandonment Rate When Onboarding New Users at the Start of Each Iteration

Iteration 3 - Implementation Plan

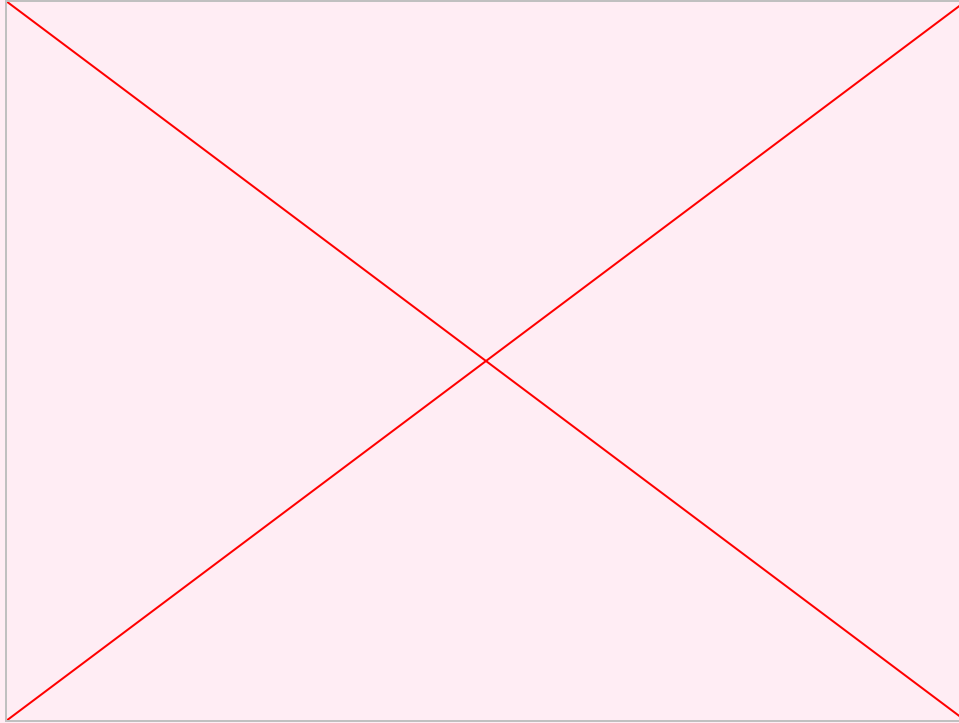

- Create links for meetups, not just for groups.
- People (+1s) can use the link to join the meetup, without the group
- Can choose multiple groups for a meetup

Iteration 4

Iteration 4 - Feedback

We asked about
the ability to add
plus ones to a
meetup

Iteration 4 - Findings

- Being able to add a plus-one is useful
- However sometimes groups are tight-knit and do not want additional people invited without them knowing
- At the very least, people should be notified when a new person is added to a meetup

Iteration 4 - Quantitative Measurements

We timed how long it takes for four users to create an account, join a group and confirm attendance to a meetup. Their times were 1m1s, 56s, 1m9s. Average time:

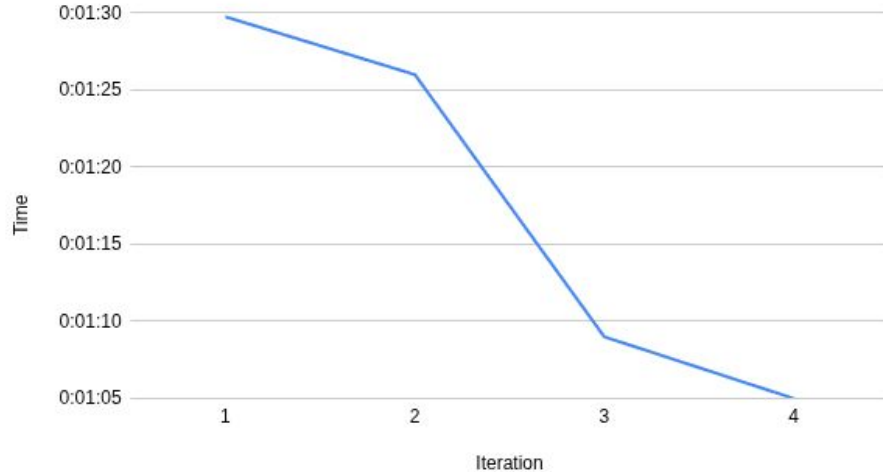

We asked a different user to attempt suggesting an actual meetup with BeThere with a friend group. The user sent a web invite link for the meetup to their group chat.

Out of 6 friends, all 6 clicked on the link and responded to the meetup.

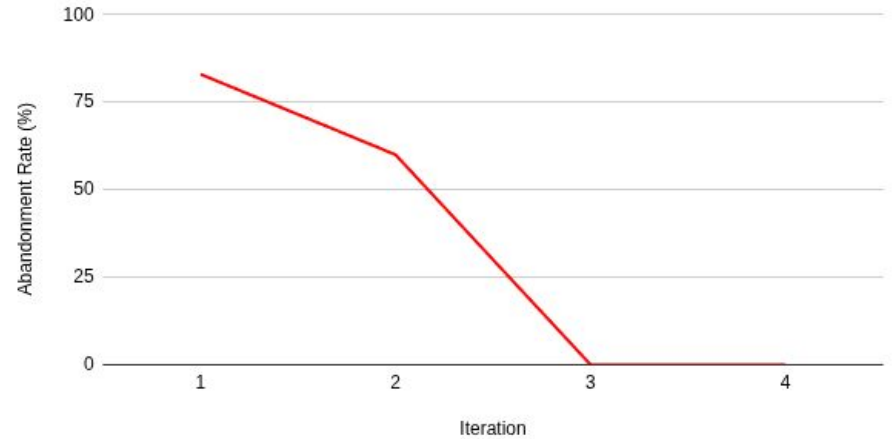

Abandonment rate 0%.

Iteration 4 - Quantitative Measurements

Average Time To Join Meetup At The Start of Each Iteration

Abandonment Rate When Onboarding New Users at the Start of Each Iteration

Iteration 4 - Implementation Plan

- Plus-ones should not be able to add plus-ones.
- Suggesters control whether plus-ones are allowed
- Participants can see who invited each plus-one
